

SERIES A · 2026

MERIDIAN

Refuelling satellites in orbit, so they never have to die.

SERIES A · $28M FICTIONAL EXAMPLE DECK

THE PROBLEM

EVERY YEAR, $9B OF WORKING SATELLITES ARE RETIRED BECAUSE THEIR TANKS ARE EMPTY.

AT A GLANCE

N OF 1: THE ONLY REFUELLING SERVICE WITH FLIGHT HERITAGE.

DOCKING MISSIONS FLOWN	3
PROPELLANT TRANSFERRED ON ORBIT	412 kg
CONTRACTED BACKLOG	$61M
DEPOTS IN ORBIT BY 2028	2
DOCKING SUCCESS RATE	100%
OPERATORS UNDER CONTRACT	7
SATELLITE LIFE ADDED PER REFUEL	14 mo
COST PER REFUEL AT SCALE	$1.8M

Source: Company data as of Sep 30, 2026 (illustrative)

WHY NOW

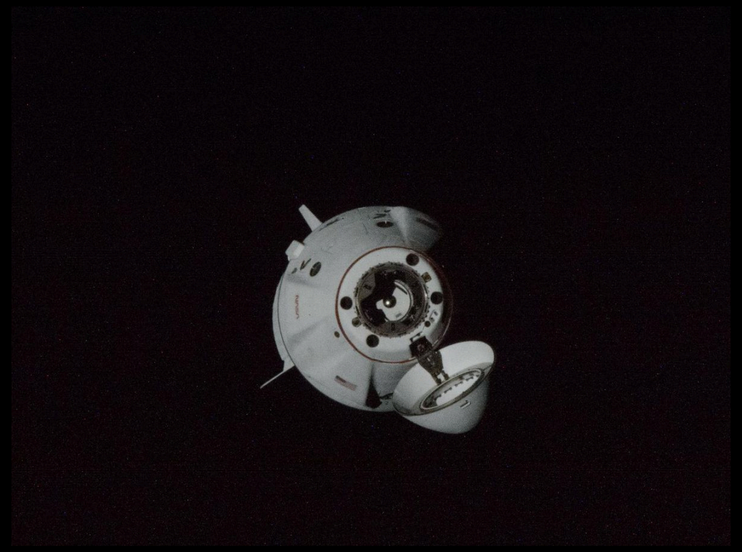

EVERY PIECE OF ON-ORBIT REFUELLING HAS ALREADY FLOWN.

ROBOTIC FUEL TRANSFER

NASA's Robotic Refueling Mission moved fuel robotically on the ISS in 2013

Image: NASA

AUTONOMOUS DOCKING

Commercial spacecraft have docked with the ISS without a pilot since 2019

Image: NASA

ROBOTIC SERVICING

Canadarm2 and Dextre service hardware on orbit every year

Image: NASA

OUR DEPOT BUSINESS

The depot model turns one launch into dozens of refuels.

UNIT ECONOMICS

EACH DEPOT GENERATION CUTS THE COST OF A REFUEL BY MORE THAN HALF.

MILESTONES

DELIVERED ON EVERY MILESTONE WE PROMISED AT SEED.

MAR 2024

First docking

Pathfinder captures a client mock-up

NOV 2024

First transfer

40 kg xenon moved on orbit

JUN 2025

First customer

Commercial GEO operator, 14-month extension

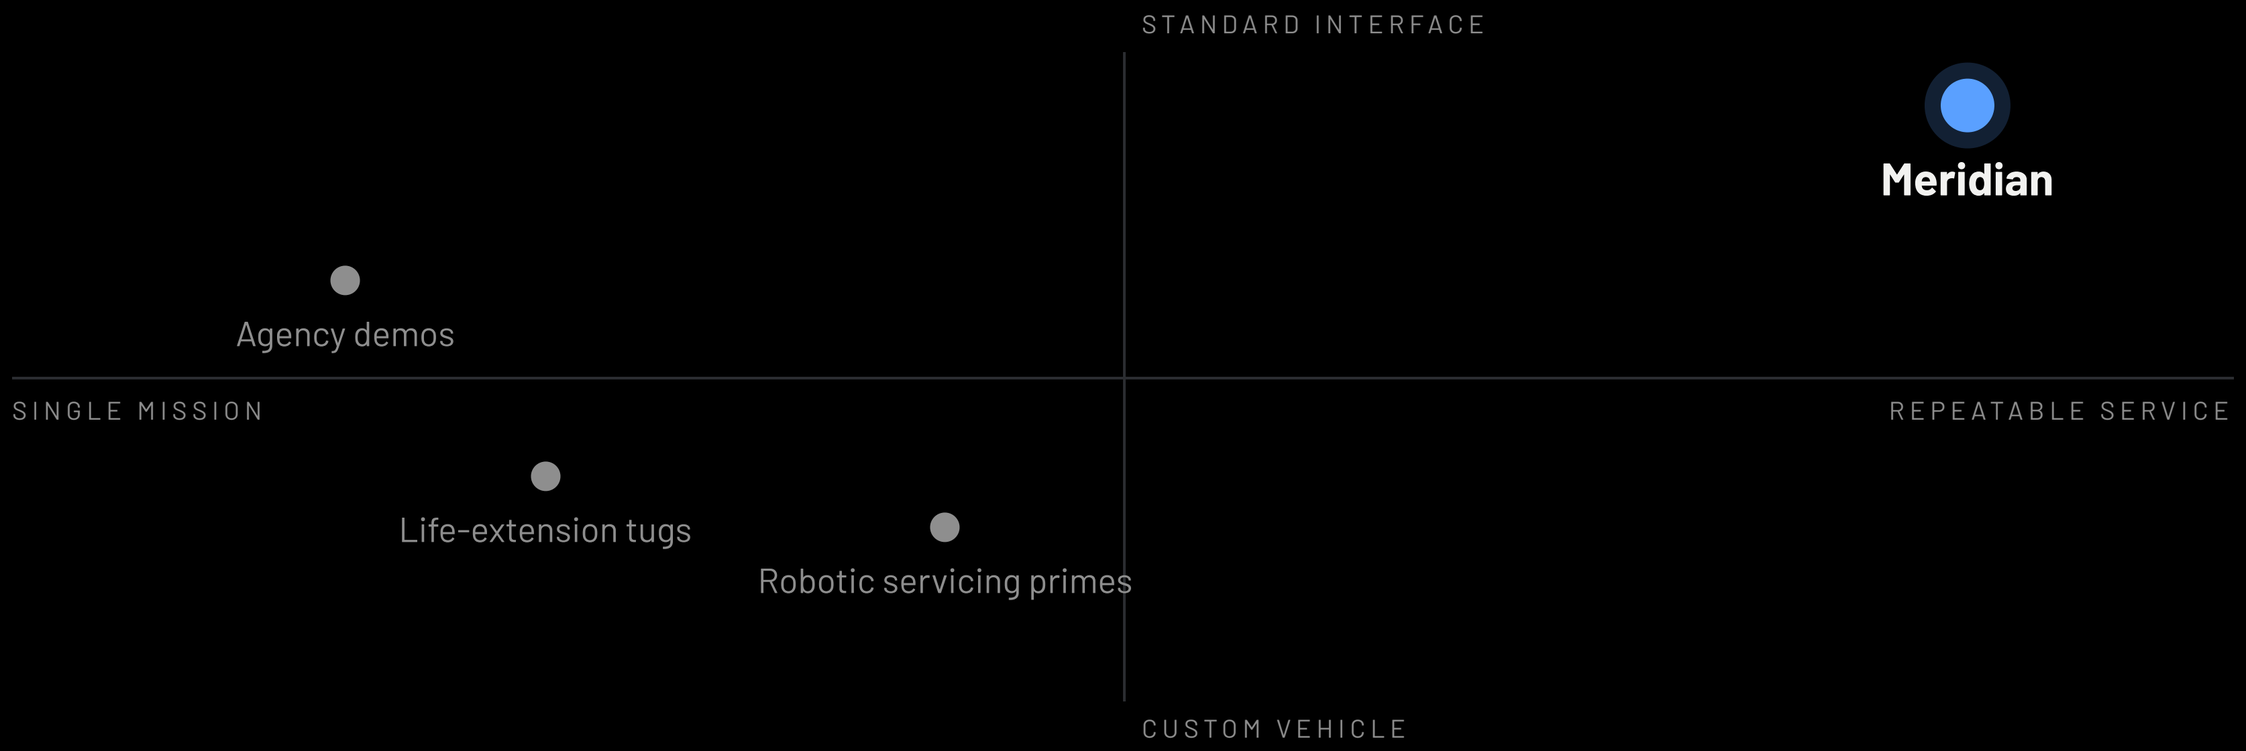

2027

Depot 1

2,000 kg capacity, 20 refuels per year

COMPETITION

THE ONLY STANDARD INTERFACE BUILT FOR REPEAT BUSINESS.

THE ASK

$28M SERIES A TO PUT DEPOT 1 IN ORBIT.

$28M

THIS ROUND DELIVERS

- Depot 1 operating with 20 refuels per year
- $150M contracted backlog
- Series B at depot-network scale

55%

Depot 1 build & launch

2027 launch slot reserved

25%

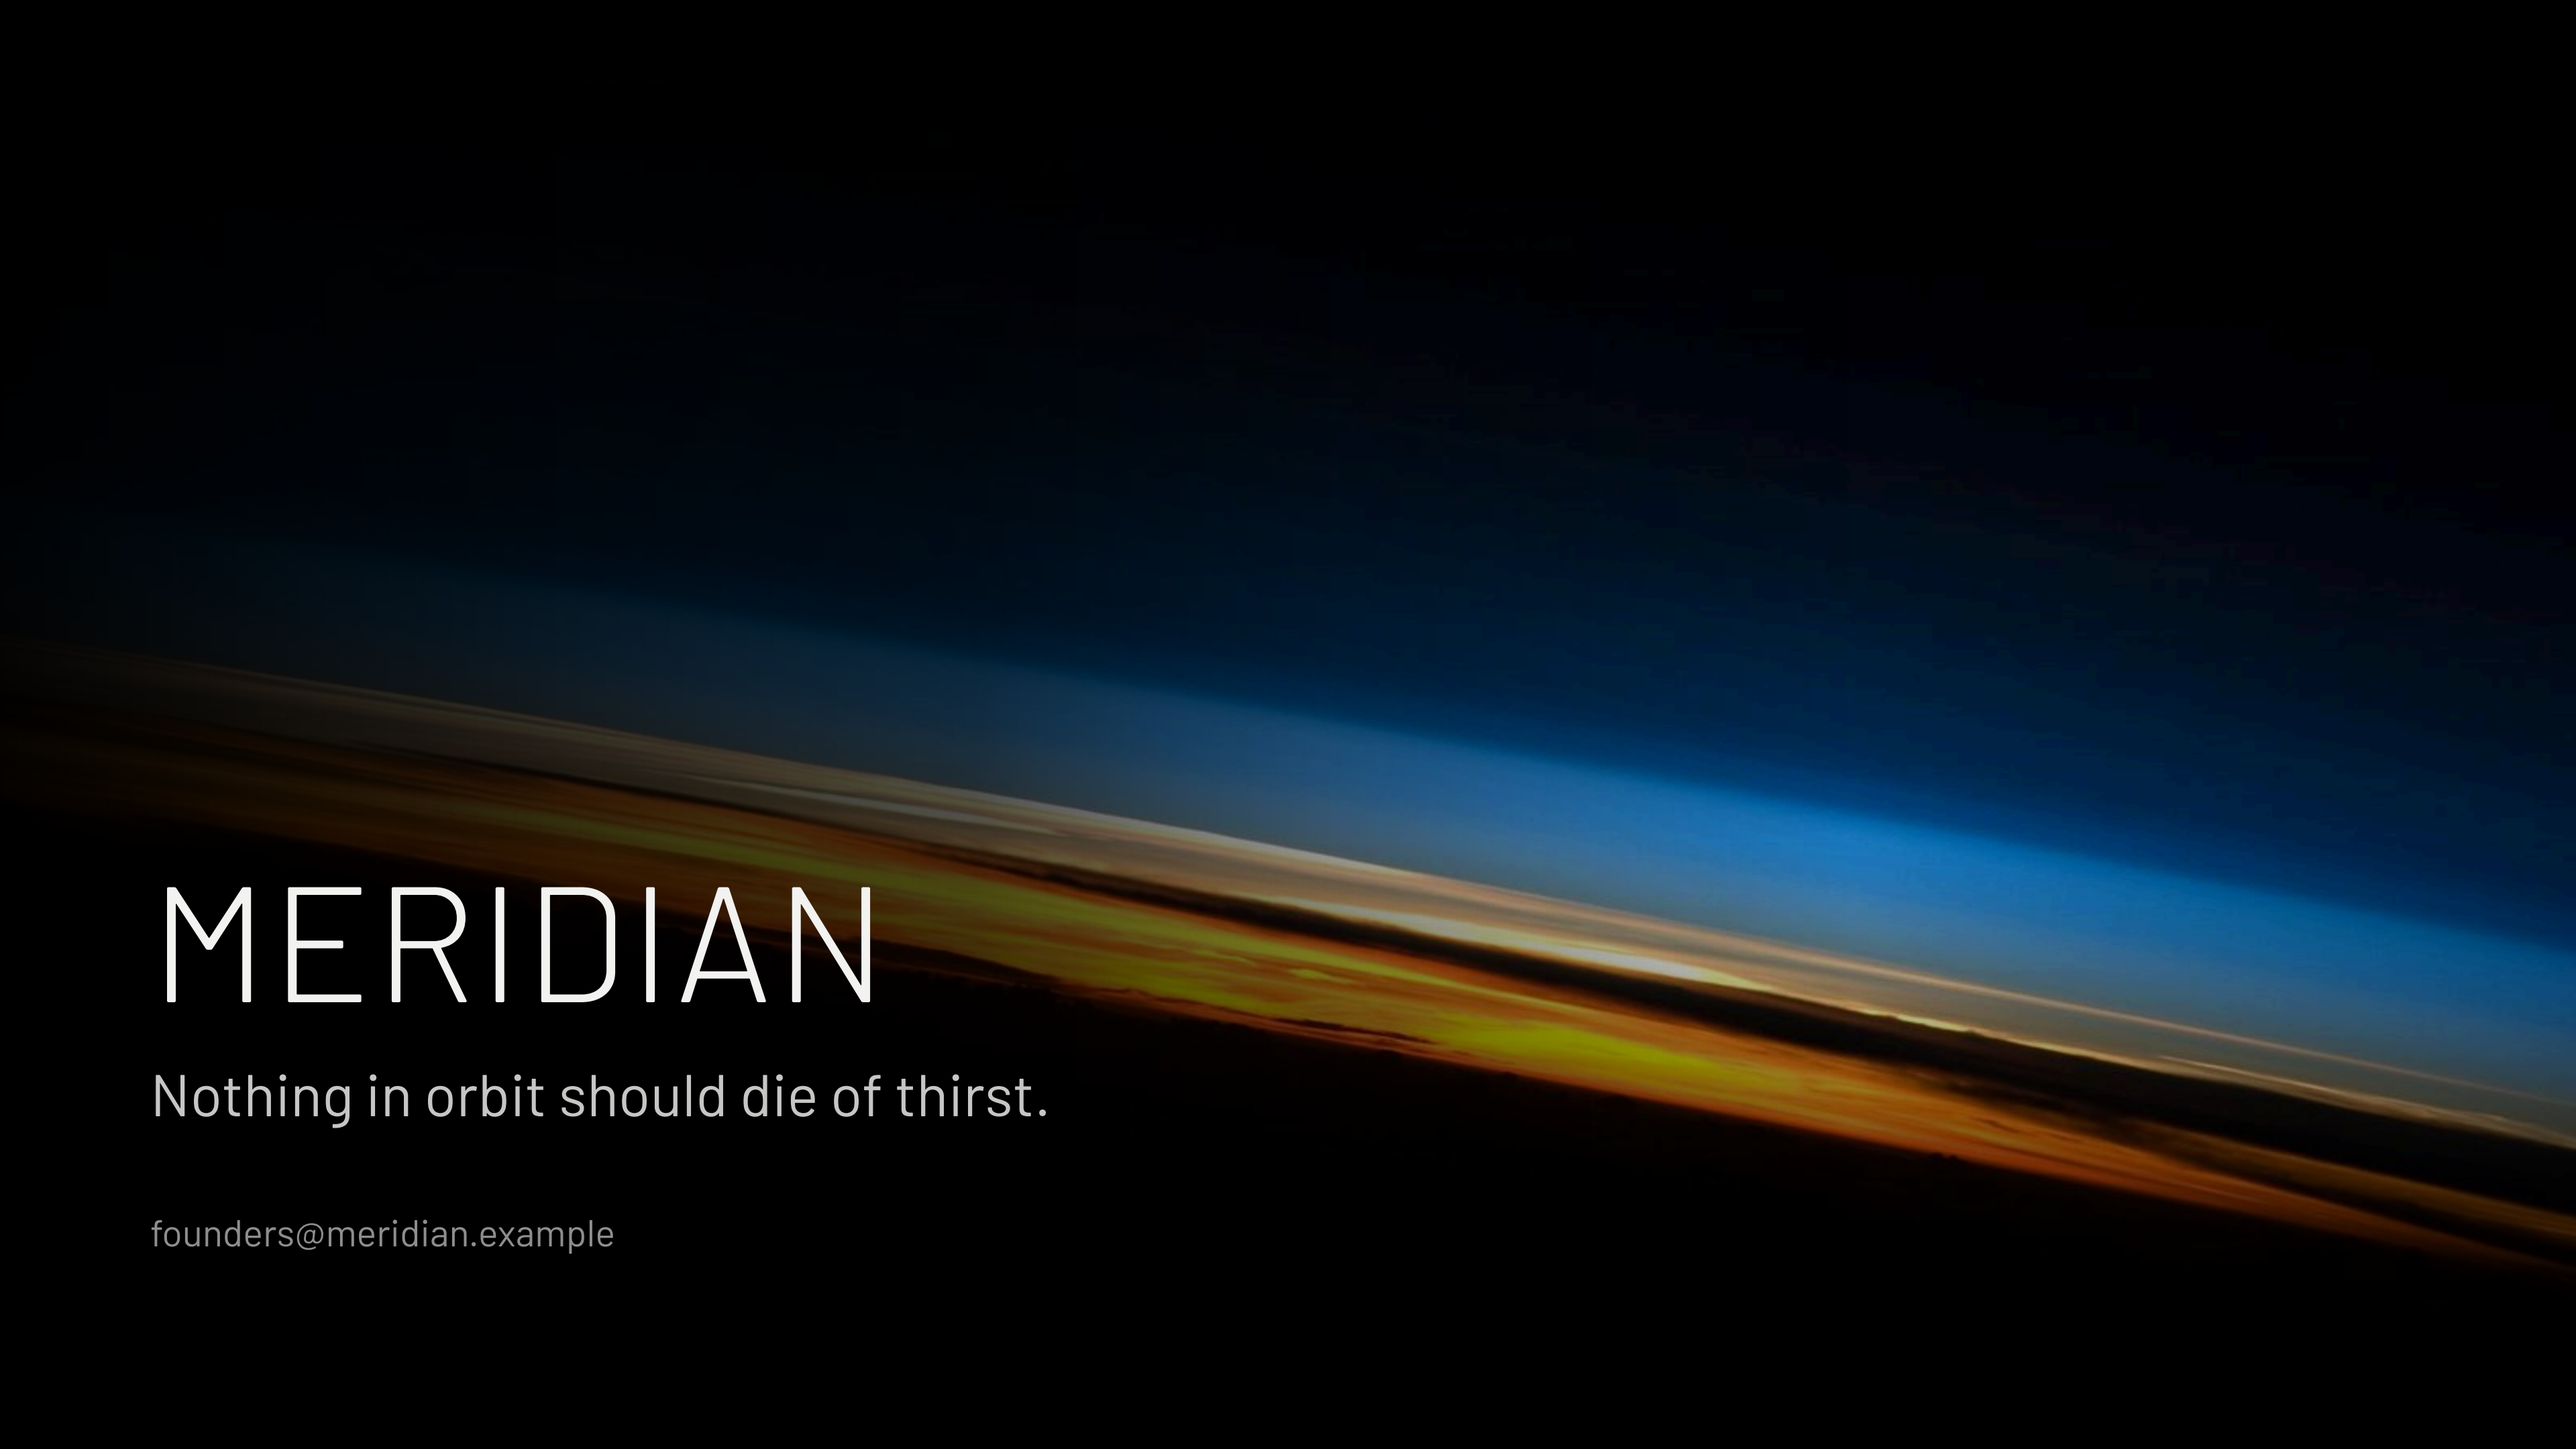

Interface adoption

Free docking plates for 30 new satellites

20%

Team & operations

24 months of runway

MERIDIAN

Nothing in orbit should die of thirst.
